

SPRAILA

Universal primer filler

The Spraila universal primer ensures solid lacquer preparation, by priming all objects made of wood, metal, stone, and glass. The product creates a smooth base and good adhesion for the following top coat.

Anti-corrosion primer

The racing anti-corrosion primer is an active rust protection primer for bare metal surfaces. The zinc chromate-free product is highly corrosion resistant and can also be used as a welding primer and on zinc and aluminium bases.

Zinc rich primer

Spraila zinc rich primer is a highly effective, zinc-based metallic rust protection primer. The high zinc content provides a long-term seal and guarantees a high level of corrosion protection, even at temperatures above 400°C. It is excellently suited for all car parts that do not need to be painted over, e.g. exhaust pipe systems, welded joints, zinc-plated parts and the insides of car bodies.

Zinc-alu spray

Spraila zinc-alu spray is the ideal corrosion protection for constructions exposed to water and weathering and for improving damaged zinc surfaces. Can be used for heating systems, pipes, steel structures, radiators, railings and for coating inner edges of metal sheets during spot welding.

Chrome effect

Spraila chrome effect is a fast-drying acrylic paint that stands out thanks to its very good covering properties, high light and temperature resistance and excellent yield. This paint lends all smooth surfaces a metallic, silver chrome-like effect. It is partially weather resistant, however it is not wear resistant. Do not coat with clear lacquer!

Plastic adhesion primer

Spraila plastic adhesion primer improves the bonding of the subsequent coat of paint on most of the plastic surfaces, e.g. spoilers, plastic wing mirrors and plastic bumpers.

Spray for plastics

Spraila spray for plastics is a fast-drying special-combination paint for plastic parts. This allows all car parts made of hard plastic, polyester and polycarbonate to be refurbished. Can be used on plastic bumpers, wing mirrors, spoilers etc. As a primer, the Spraila plastic bonding agent ensures an ideal surface.

Heat resistant

Spraila heat resistant paint is ideally suited for household and car parts subject to high temperature loads, such as e.g. exhaust pipes, garden grills, boilers, breeze ovens. The product is highly heat-resistant up to 300°C or 650°C, weather resistant and durable.

Transparent spray

Spraila transparent quality paint to give a colour to objects of which the surface texture should still be seen, like glass, transparent plastic parts, lamps, objects from wood, metal, plastic, etc. (not permitted as far as the Road Traffic Act is concerned).

Fill In

FILL IN is pre-filled with propelling gas and other additives. The end product is achieved by adding the paint. The specialist shop is liable for the end product.

Standard paint sprays

The Spraila paint sprays are perfect for painting decorative parts on the car and as a protective coat for objects of all kinds, in the home and garden. The Spraila paint sprays are fast drying, very economic, scratch resistant and weather resistant. The Spraila paint spray range comprises a number of standard colour tones.

300 905 (500 ml)
black gloss

300 921 (500 ml)

white gloss

300 940 (500 ml)
white matt

Brake caliper paint

The Spraila brake caliper paint allows colour effects to be achieved quickly on the visible parts of the brakes. The brake caliper and other parts clearly contrast to the wheel rims; this upgrades the vehicle and lends it a racing look.

RAL colour shades

The Spraila RAL paint sprays are ideal for top quality cars coats and decorative paintwork of all kinds. A large number of RAL colour tones offers colour tone precision. Spraila RAL is therefore also suitable for industrially standardised colour tones and/or painted objects. Spraila RAL paint sprays dry fast, are scratch resistant, very economic and weather resistant.
